Green Seal
Verified Raw Materials

Set Your Company Apart

GreenSeal'sVerifiedRawMaterialsProgramgivesyourcustomersconfidencethatyourrawmaterial meets the chemical-specific requirements of our stringent standards. We look beyond the active ingredients to the full composition of your raw material to ensure that all the chemicals, including impurities and by-products, will make the cut in Green Seal certified products.

Verifying your Raw Material with Green Seal:

- Sets you apart from your competitors and opens the door to new business opportunities
- Attracts customers by taking the guesswork out of finding raw materials that will align with their Green Seal certifications
- Showcases your leadership in green chemistry by demonstrating you meet Green Seal's strict chemical specific criteria for human health and the environment

How it Works

Whether your raw material belongs in paints, cleaning products, cosmetics or more, we can verify it against our standards. Here's how it works:

- You'll choose the standards you want to verify against and the maximum recommended use level for your product
- We'll screen your formula against ingredient-specific health and environmental criteria of the relevant standards and confirm that everything is acceptable. We'll also provide details on how your raw materials fits with product-level criteria that may affect your prospective customers

What You'll Get

- A Green Seal Verification letter to broadcast to your customers that your raw materials meet our chemical-specific criteria
- Promotion through our online database of verified suppliers
